CONSTRUCTION OF PONDCRETE TEMPORARY SHELTERS

Proper installation of the proposed pondcrete shelters requires anchoring the structures to resist design loads. Current plans include coring through the existing 750 and 904 pad asphalt and installing auger type earth anchors. We expect that it will be necessary to remove 8 inch diameter asphalt plugs on 15 foot centers along the perimeter of each shelter. These anchors minimize the displacement of potentially contaminated soils, but since shelter locations lie on Solid Waste Management Units, storage or disposal of waste asphalt requires consideration. We propose to drum this waste and store it on the pads for the duration of the pondcrete reprocessing project. Upon removal of the shelters, as much asphalt as practicable will be backfilled into the holes. Residual asphalt waste will be disposed of as mixed waste.

This action requires your written approval if we are to proceed with this project. In order to avoid impact to the project schedule, we must receive your concurrence on this matter on or before December 4, 1989. If you have any questions, please call.
